Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New plant protein, useful for regulating differentiation and proliferation of plant cells, especially for stimulation of somatic embryogenesis

Kondorosi A;

Cebolla A,

The present sequence encodes an alfalfa protein, designated ccc52Ms.

The protein contains repeated WD40 (Trp-Asp) motifs, and belongs to the far (fizzy-related) subfamily. The WD40 motifs are situated in the central portions and the C-terminal portion of the protein. The protein comprises 7 domains, and the last domain, domain 7, contains a potential liaison site for cyclims. The N-terminal region of the protein has a peptide sequence (DRFIPSR) which corresponds to a motif which is conserved in fir proteins. The protein intervenes in the regulation of cellular differentiation, and augments endoreplication. The polymuclocitide sequence and its antisense sequences are used to regulate the differentiation and proliferation of plant cells and for stimulating somatic embryogenesis. They are also useful for promoting conditions and its in vitro regeneration of plants from central sources, and to stimulate in vitro regeneration of plants from callus in culture, by increasing the conversion of embryos.

Sequence 2006 BP; 555 A; 398 C; 441 G; 612 T; 0 other;

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
sequences have activities uch as: oyfostatic; hepatotropic; vulnerary;
antipsoriatic; antiparkinsonian; nootropic; neuroprotective;
osteopathic; antiparkinsonian; nootropic; neuroprotective;
continuostimulant; cardiant; thrombolytic; coagulant; vasotropic;
immunostimulant; cardiant; thrombolytic; coagulant; vasotropic;
antidiabetic, hypotensive; dermatological; immunosuppressive;
antidiabetic, hypotensive; dermatological; antifungal; antirheumatic;
antidiapetic, hypotensive; dermatological; immunosuppressive;
continuostimulant; cardiant; thrombolytic; coagulant; vasotropic;
antidiapetic, hypotensive; dermatological; immunosuppressive;
coagulation; hypothyroidism condition associated with an ORTX-associated disorder. The
nucleic acides can be used to express ORFX proteins in gene therapy,
cetors. The proteins and nucleic acids may be used to treat cancers,
proliferative disorders, neurodegenerative disorders, osteoarthritis,
graft vs host disease, cardiavascular disease, diabetes mellitus,
cythematosus, severe combined immunodeficiency (SCID), AIDS, viral,
bacterial or fungal infection, malaria, autoimmune disorders, asterma,
allergies, aplastic anaemia, burns, wounds, bone and cartilage damage,
coagulation; to inhibit thrombosis; and as a contraceptive.
